Class 7 Science NCERT Solutions in English Chapter – 12 Reproduction in Plants

- Post category:Class 7 Science NCERT Solution In English

Here we are providing **Class 7 Science NCERT Solutions in English** Chapter – 12 Reproduction in Plants include all questions presented in the NCERT Science Class 7 books. Candidates can enlist the help of the NCERT Science Class 7 solutions in English on the next page and gain a deeper understanding of the concepts. NCERT Class 7 Science NCERT Solutions in English Chapter – 12 Reproduction in Plants Class 7 Science NCERT Solutions in English Chapter – 12 Reproduction in Plants is designed by our team of subject matter experts to help students prepare for exams. English students can view the PDF of the NCERT Class 7 Science Solutions on the page below. From the NCERT Science Book English Questions and Answers on this page, students will learn how to correctly solve NCERT problems.

Remember that the NCERT Class 7 Science Book Solution is the best resource for a good study of the 18 chapters. Use the NCERT Class 7 Science Book Solution as a reference and keep practicing with the answers to questions and exercises until you improve your answers to all chapters of your Class 7 Science Program. Class 7 Science NCERT Solutions in English Chapter – 12 Reproduction in Plants will help you solve all NCERT Class 7 Science questions chapter 12 smoothly. if you want more notes for various subject then **click here**

Class 7 Science NCERT Solutions in English Chapter – 12 Reproduction in Plants

---

Q 1:

Fill in the blanks:

(a) Production of new individuals from the vegetative part of parent is called_____.

(b) A flower may have either male or female reproductive parts. Such a flower is called_____.

(c) The transfer of pollen grains from the anther to the stigma of the same or of another flower of the same kind is known as _____.

(d) The fusion of male and female gametes is termed as _____.

(e) Seed dispersal takes place by means of _____, _____ and _____.

Ans 1:

(a) Production of new individuals from the vegetative part of parent is called **vegetative propagation.**

(b) A flower may have either male or female reproductive parts. Such a flower is called **unisexual flower.**

(c) The transfer of pollen grains from the anther to the stigma of the same or of another flower of the same kind is known as **pollination.**

(d) The fusion of male and female gametes is termed as **fertilisation.**

(e) Seed dispersal takes place by means of **wind, water** and **animal.**

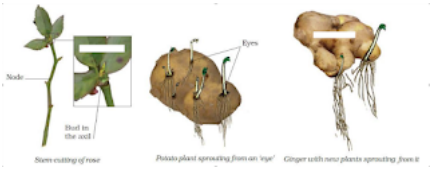
Q 2:

Describe the different methods of asexual reproduction. Give examples.

Ans 2:

The different methods of asexual reproduction: **Vegetative propagation**

It is a type of asexual reproduction in which new plants are produced from roots, stems, leaves and buds.



Budding

Organisms such as Hydra, a bud develops as an outgrowth at one specific site. These buds develop into tiny individuals and when fully mature, detach from the parent body and become new independent individuals.

Fragmentation

When water and nutrients are available algae grow and multiply rapidly and breaks up into two or more fragments. These fragments or pieces grow into new individuals.

Spore formation

The spores are asexual reproductive bodies. Each spore is covered by a hard protective coat to withstand unfavourable conditions such as high temperature and low humidity. So they can survive for a long time. Under favourable conditions, a spore germinates and develops into a new individual.

Q 3:

Explain what you understand by sexual reproduction.

Ans 3:

When two parents are involved in reproduction, the method is called sexual reproduction. The male and female gametes fuse during fertilization to produce zygote. The zygote subsequently develops into an embryo which further develops into a new individual.

Q 4:

State the main difference between asexual and sexual reproduction.

Ans 4:

S.N	**Asexual Reproduction**	**Sexual Reproduction**
1.	Only one parent is needed.	Two parent (Male and female gametes) are required.
2.	Offspring is normally similar to parent.	Offspring shows variation with respect to parent.
3.	Yeast, hydra, spirogyra etc. show asexual reproduction.	Animals, human, insects etc. show sexual reproduction.

Q 5:

Sketch the reproductive parts of a flower.

Ans 5:

Q 6:

Explain the difference between self-pollination and cross-pollination.

Ans 6:

S.No.	**Self-polination**	**Cross-polination**

1.	Pollen grains are transferred to stigma of same flower.	Pollen grains are transferred to stigma of different flower.
2.	Pollinatingagentis not required.	Pollinating agent such as wind, water, insects, etc. is not required.
3.	Examples: Peanuts, sunflower, etc.	Examples: Mango, rose and most of the flowering plants.

Q 7:

How does the process of fertilisation take place in flowers?

Ans 7:

Once pollen grain spreads on the stigma, it produces a pollen tube. This process is called germination of pollen grain. The pollen tube penetrates the style and reaches the ovary. Male nucleus is transferred through this pollen tube. Finally, fusion of male and female nuclei takes place inside the ovary. This step is called fertilization.

Q 8:

Describe the various ways by which seeds are dispersed.

Ans 8:

Following are the various methods of seed dispersal:

- **Dispersal by Wind :** Seeds of some plants are light-weight and some hair-like or wing-like structures are present on them. Such seeds float on air and are thus dispersed by wind. Example: Dandelion, maple, drumstick, etc.

- **Dispersal by Water :** Dispersal by water takes place in some aquatic plants and in some which grow near a water body. Seeds of water lily float and thus dispersed by water. The coconut seed has a tough fibrous covering which has plenty of air inside. This helps the coconut seeds in floating on water.

- **Dispersal by Animals :** Some seeds have spine like structures on them. They get stuck to the fur of animals and thus get spread to different places. Examples; Beggar tick, Xanthium, etc. Some seeds are swallowed by birds and animals along with fruits. These seeds get dispersed with bird or animal droppings.

- **Dispersal by Bursting :** Some fruits burst open when they mature. The force of bursting is enough to spread the seeds. Examples; Ladyfinger, castor, balsam, etc.

- **Dispersal by Humans :** Human beings also help in dispersal of seeds, especially during farming.

Q 9:

Match items in Column I with those in Column II:

Column I	**Column II**
(a) Bud	(i) Maple
(b) Eyes	(ii) Spirogyra
(c) Fragmentation	(iii) Yeast
(d) Wings	(iv) Bread mould
(e) Spores	(v) Potato
	(vi) Rose

Ans 9:

Column I	**Column II**
(a) Bud	(iii) Yeast
(b) Eyes	(v) Potato
(c) Fragmentation	(ii) Spirogyra
(d) Wings	(i) Maple
(e) Spores	(iv) Bread mould

Q 10:

Tick (√) the correct Ans:

(a) The reproductive part of a plant is the

(i) leaf (ii) stem (iii) root (iv) flower

(b) The process of fusion of the male and the female gametes is called

(i) fertilisation (ii) pollination

(iii) reproduction (iv) seed formation

(c) Mature ovary forms the

(i) seed (ii) stamen

(iii) pistil (iv) fruit

(d) A spore producing plant is

(i) rose (ii) bread mould

(iii) potato (iv) ginger

(e) Bryophyllum can reproduce by its

(i) stem (ii) leaves

(iii) roots (iv) flower

Ans 10:

(a) The reproductive part of a plant is the (iv) flower.

(b) The process of fusion of the male and the female gametes is called (i) fertilisation.

(c) Mature ovary forms the (iv) fruit.

(d) A spore producing plant is (ii) bread mould.

(e) Bryophyllum can reproduce by its (ii) leaves.

If you want chapter wise NCERT Solutions for class 7 Science in English then Link given below.

CHAPTER NO.	CHAPTER NAME
1	Nutrition in Plants
2	Nutrition in Animal
3	fiber to Fabric
4	Heat
5	Acids, bases and Salts
6	physical and Chemical changes
7	Weather, Climate and Adaptations of Animals to Climate
8	Winds, Storms and Cyclones
9	Soil
10	Respiration in Organisms
11	Transportation in Animals and Plants
12	Reproduction in Plants
13	Motion and Time
14	Electric Current and its Effects
15	Light
16	Water: A Precious Resource
17	Forests : Our Lifeline
18	Waste water Story
