Class 7 Science NCERT Solutions in English Chapter – 4 Heat

- Post category:Class 7 Science NCERT Solution In English

Here we are providing **Class 7 Science NCERT Solutions in English** Chapter – 4 Heat include all questions presented in the NCERT Science Class 7 books. Candidates can enlist the help of the NCERT Science Class 7 solutions in English on the next page and gain a deeper understanding of the concepts. NCERT Class 7 Science NCERT Solutions in English Chapter – 4 Heat Class 7 Science NCERT Solutions in English Chapter – 4 Heat is designed by our team of subject matter experts to help students prepare for exams. English students can view the PDF of the NCERT Class 7 Science Solutions on the page below. From the NCERT Science Book English Questions and Answers on this page, students will learn how to correctly solve NCERT problems.

Remember that the NCERT Class 7 Science Book Solution is the best resource for a good study of the 18 chapters. Use the NCERT Class 7 Science Book Solution as a reference and keep practicing with the answers to questions and exercises until you improve your answers to all chapters of your Class 7 Science Program. Class 7 Science NCERT Solutions in English Chapter – 4 Heat will help you solve all NCERT Class 7 Science questions chapter 4 smoothly. if you want more notes for various subject then **click here**

Class 7 Science NCERT Solutions in English Chapter – 4 Heat

Q 1:

State similarities and differences between the laboratory thermometer and the clinical

thermometer.

Ans 1:

Similarities :

- Working principle of both the thermometer is same.
- Both are used to measure temperature.
- Both have a thick walled glass tube enclosing a fine uniform bore capillary tube.
- Mercury is used in both thermometers to measure temperature.
- Both have Celsius and Fahrenheit markings.

Differences :

- Laboratory thermometer is used to measure temperature of different objects in factories and laboratory where as clinical thermometer is used to measure the temperature of human beings only.
- Generally, laboratory thermometer has temperature range from −10°C to 110°C where as clinical thermometer has temperature range from 35°C to 42°C.
- Usually laboratory thermometer does not have any constriction where as clinical thermometer has the small constriction near the mercury bulb.
- Laboratory thermometer has to be kept upright while taking the reading where as clinical thermometer can be tilted while taking reading.

Q 2:

Give two examples each of conductors and insulators of heat.

Ans 2:

Conductors : Copper, aluminum and iron.

Insulators : Wood, water and air.

Q 3:

Fill in the blanks:

(a) The hotness of an object is determined by its _____.

(b) Temperature of boiling water cannot be measured by a ____ thermometer.

(c) Temperature is measured in degree _____.

(d) No medium is required for transfer of heat by the process of _____.

(e) A cold steel spoon is dipped in a cup of hot milk. It transfers heat to its other end by the process of _____.

(f) Clothes of _____ colours absorb heat better than clothes of light colours.

Ans 3:

(a) The hotness of an object is determined by its temperature.

(b) Temperature of boiling water cannot be measured by a clinical thermometer.

(c) Temperature is measured in degree Celsius.

(d) No medium is required for transfer of heat by the process of radiation.

(e) A cold steel spoon is dipped in a cup of hot milk. It transfers heat to its other end by the process of conduction.

(f) Clothes of dark colours absorb heat better than clothes of light colours.

Q 4:

Match the following:

(i) Land breeze blows during (a) summer

(ii) Sea breeze blows during (b) winter

(iii) Dark coloured clothes are preferred during (c) day

(iv) Light coloured clothes are preferred during (d) night

Ans 4:

(i) Land breeze blows during (d) night

(ii) Sea breeze blows during (c) day

(iii) Dark coloured clothes are preferred during (b) winter

(iv) Light coloured clothes are preferred during (a) summer

Q 5:

Discuss why wearing more layers of clothing during winter keeps us warmer than

wearing just one thick piece of clothing.

Ans 5:

The air gets trapped between two layers of warm clothes. Air acts as insulator of heat. This layer prevents our body heat to escape in the surroundings. More layers of thin clothes will allow more air to get trapped and as a result we will not feel cold. So wearing more layers of clothing during winter keeps us warmer than wearing just one thick piece of clothing.

Q 6:

Look at Fig. 4.13. Mark where the heat is being transferred by conduction, by convection and by radiation.

Fig. 4.13

Ans 6:

Q 7:

In places of hot climate it is advised that the outer walls of houses be painted white.

Explain.

Ans 7:

In places of hot climate it is advised that the outer walls of houses be painted white because white colour reflects most of the heat that falls on it or we can say it absorbs less amount of heat. Therefore, the temperature inside the house does not increase very much.

Q 8:

One litre of water at 30°C is mixed with one litre of water at 50°C. The temperature of the mixture will be

(a) 80°C (b) more than 50°C but less than 80°C

(c) 20°C (d) between 30°C and 50°C

Ans 8:

(d) between 30°C and 50°C

Q 9:

An iron ball at 40°C is dropped in a mug containing water at 40°C. The heat will

(a) flow from iron ball to water.

(b) not flow from iron ball to water or from water to iron ball.

(c) flow from water to iron ball.

(d) increase the temperature of both.

Ans 9:

(b) not flow from iron ball to water or from water to iron ball.

Q 10:

A wooden spoon is dipped in a cup of ice cream. Its other end

(a) becomes cold by the process of conduction.

(b) becomes cold by the process of convection.

(c) becomes cold by the process of radiation.

(d) does not become cold.

Ans 10:

(d) does not become cold.

Q 11:

Stainless steel pans are usually provided with copper bottoms. The reason for this could be that

(a) copper bottom makes the pan more durable.

(b) such pans appear colour fully.

(c) copper is a better conductor of heat than the stainless steel.

(d) copper is easier to clean than the stainless steel.

Ans 11:

(c) copper is a better conductor of heat than the stainless steel.

If you want chapter wise NCERT Solutions for class 7 Science in English then Link given below.

CHAPTER NO.	CHAPTER NAME
1	Nutrition in Plants
2	Nutrition in Animal
3	fiber to Fabric
4	Heat
5	Acids, bases and Salts
6	physical and Chemical changes
7	Weather, Climate and Adaptations of Animals to Climate
8	Winds, Storms and Cyclones
9	Soil
10	Respiration in Organisms
11	Transportation in Animals and Plants
12	Reproduction in Plants
13	Motion and Time
14	Electric Current and its Effects
15	Light
16	Water: A Precious Resource
17	Forests : Our Lifeline
18	Waste water Story
