Class 7 Science NCERT Solutions in English Chapter – 10 Respiration in Organisms

- Post category:Class 7 Science NCERT Solution In English

Here we are providing **Class 7 Science NCERT Solutions in English** Chapter – 10 Respiration in Organisms include all questions presented in the NCERT Science Class 7 books. Candidates can enlist the help of the NCERT Science Class 7 solutions in English on the next page and gain a deeper understanding of the concepts. NCERT Class 7 Science NCERT Solutions in English Chapter – 10 Respiration in Organisms Class 7 Science NCERT Solutions in English Chapter – 10 Respiration in Organisms is designed by our team of subject matter experts to help students prepare for exams. English students can view the PDF of the NCERT Class 7 Science Solutions on the page below. From the NCERT Science Book English Questions and Answers on this page, students will learn how to correctly solve NCERT problems.

Remember that the NCERT Class 7 Science Book Solution is the best resource for a good study of the 18 chapters. Use the NCERT Class 7 Science Book Solution as a reference and keep practicing with the answers to questions and exercises until you improve your answers to all chapters of your Class 7 Science Program. Class 7 Science NCERT Solutions in English Chapter – 10 Respiration in Organisms will help you solve all NCERT Class 7 Science questions chapter 10 smoothly. if you want more notes for various subject then **click here**

Class 7 Science NCERT Solutions in English Chapter – 10 Respiration in Organisms

---

Q 1:

Why does an athlete breathe faster and deeper than usual after finishing the race?

Ans 1:

When the athlete runs in the race, his body needs more energy. In order to get extra energy, the athlete breathes faster. Because more oxygen is supplied to our cells. It speeds up the breakdown of food and more energy is released.

Q 2:

List the similarities and differences between aerobic and anaerobic respiration.

Ans 2:

- **Similarities :** Food is oxidized in both cases and energy is released.

- **Differences :** Carbon dioxide and water are the end products of aerobic respiration, while alcohol is the end product of anaerobic respiration.

Aerobic respiration releases more energy than anaerobic respiration.

Q 3:

Why do we often sneeze when we inhale a lot of dust-laden air?

Ans 3:

When dust particles enter our nostril, it triggers a message to the brain. The brain instructs the nasal chamber to initiate sneezing. This is a method to remove the unwanted dust particles from the nostrils. Sneezing is a type of defence mechanism used by our body.

Q 4:

Take three test-tubes. Fill each of each with water. Label them A, B and C. Keep a snail in test-tube A, a water plant in test-tube B and in C, keep snail and plant both. Which test tube would have the highest concentration of CO_2?

Ans 4:

Living organisms release CO_2 during respiration whereas plant utilize CO_2 for photosynthesis. So, the test tube A will have the highest concentration of carbon dioxide because the carbon dioxide as it comes only by respiration of snail. In test tubes B and C, a part of the carbon dioxide is utilized by the plant for photosynthesis and hence there is less concentration of carbon dioxide.

Q 5:

Tick the correct Ans :

(a) In cockroaches, air enters the body through

(i) lungs

(ii) gills

(iii) spiracles

(iv) skin

(b) During heavy exercise, we get cramps in the legs due to the accumulation of

(i) carbon dioxide

(ii) lactic acid

(iii) alcohol (iv) water

(c) Normal range of breathing rate per minute in an average adult person at rest is:

(i) 9 – 12

(ii) 15–18

(iii) 21–24

(iv) 30–33

(d) During exhalation, the ribs

(i) move outwards

(ii) move downwards

(iii) move upwards

(iv) do not move at all

Ans 5:

(a) In cockroaches, air enters the body through (iii) spiracles.

(b) During heavy exercise, we get cramps in the legs due to the accumulation of (ii) lactic acid.

(c) Normal range of breathing rate per minute in an average adult person at rest is (ii) 15–18.

(d) During exhalation, the ribs (ii) move downwards.

Q 6:

Match the items in Column I with those in Column II:

Column I	Column II
(a) Yeast	(i) Earthworm
(b) Diaphragm	(ii) Gills
(c) Skin	(iii) Alcohol
(d) Leaves	(iv) Chest cavity
(e) Fish	(v) Stomata
(f) Frog	(vi) Lungs and skin

Ans 6:

Column I	Column II
(a) Yeast	(iii) Alcohol
(b) Diaphragm	(iv) Chest cavity
(c) Skin	(i) Earthworm
(d) Leaves	(v) Stomata
(e) Fish	(ii) Gills
(f) Frog	(vi) Lungs and skin

Q 7:

Mark 'T' if the statement is true and 'F' if it is false:

(i) During heavy exercise the breathing rate of a person slows down. **(T/F)**

(ii) Plants carry out photosynthesis only during the day and respiration only at night**.**

(T/F)

(iii) Frogs breathe through their skins as well as their lungs**. (T/F)**

(iv) The fishes have lungs for respiration.

(T/F)

(v) The size of the chest cavity increases during inhalation. **(T/F)**

Ans 7:

(i) During heavy exercise the breathing rate of a person slows down. **(False)**

(ii) Plants carry out photosynthesis only during the day and respiration only at night. (False)

(iii) Frogs breathe through their skins as well as their lungs. **(True)**

(iv) The fishes have lungs for respiration.

(False)

(v) The size of the chest cavity increases during inhalation**. (True)**

Q 8:

Given below is a square of letters in which are hidden different words related to respiration in organisms. These words may be present in any direction – upwards, downwards, or along the diagonals. Find the words for your respiratory system. Clues about those words are given below the square.

S	V	M	P	L	U	N	G	S
C	Z	G	Q	W	X	N	T	L
R	M	A	T	I	D	O	T	C
I	Y	R	X	Y	M	S	R	A
B	R	H	I	A	N	T	A	Y
S	T	P	T	B	Z	R	C	E
M	I	A	M	T	S	I	H	A
S	P	I	R	A	C	L	E	S
N	E	D	K	J	N	S	A	T

(i) The air tubes of insects

(ii) Skeletal structures surrounding chest cavity

(iii) Muscular floor of chest cavity

(iv) Tiny pores on the surface of leaf

(v) Small openings on the sides of the body of an insect

(vi) The respiratory organs of human beings

(vii) The openings through which we inhale

(viii) An anaerobic organism

(ix) An organism with tracheal system

Ans 8:

(i) The air tubes of insects – Trachea

(ii) Skeletal structures surrounding chest cavity – Ribs

(iii) Muscular floor of chest cavity – Diaphragm

(iv) Tiny pores on the surface of leaf – Stomata

(v) Small openings on the sides of the body of an insect – Spiracles

(vi) The respiratory organs of human beings – Lungs

(vii) The openings through which we inhale – Nostrils

(viii) An anaerobic organism – Yeast

(ix) An organism with tracheal system – Ant

Q 9:

The mountaineers carry oxygen with them because:

(a) At an altitude of more than 5 km there is no air.

(b) The amount of air available to a person is less than that available on the ground.

(c) The temperature of air is higher than that on the ground.

(d) The pressure of air is higher than that on the ground.

Ans 9:

(b) The amount of air available to a person is less than that available on the ground

If you want chapter wise NCERT Solutions for class 7 Science in English then Link given below.

CHAPTER NO.	CHAPTER NAME
1	Nutrition in Plants
2	Nutrition in Animal
3	fiber to Fabric
4	Heat
5	Acids, bases and Salts
6	physical and Chemical changes
7	Weather, Climate and Adaptations of Animals to Climate
8	Winds, Storms and Cyclones
9	Soil

10	Respiration in Organisms
11	Transportation in Animals and Plants
12	Reproduction in Plants
13	Motion and Time
14	Electric Current and its Effects
15	Light
16	Water: A Precious Resource
17	Forests : Our Lifeline
18	Waste water Story
