Here we are providing **NCERT Solutions for Class 7** Social Science Our Enviroment Chapter – 02 Inside Our Earth Solutions are important for Class 7 students as it is an extremely important class and is also a year in which students learn the fundamentals of concepts that help them lay a solid foundation for their higher education. The NCERT solutions provide extensive material to enable students to form a good foundation with the foundations of the NCERT Class 7 Social Science 02 Inside Our Earth Environment NCERT Solutions for Class 7 Social Science Our Enviroment Chapter – 02 Inside Our Earth Improve your subject knowledge and solve multiple exam questions with ease by practicing regularly at NCERT Solutions. If You want class wise notes then **click here**

Exercise

1.

(A) What are the three layers of the earth?

Ans-

The three layers of the Earth are, the crust, the mantle and the core.

(i) Crust: The crust is the outer layer of the earth. It is the solid rock layer upon which we live.

(ii) Mantle: The mantle is made up of semi-molten rock called magma.

(iii) Core: Core is in the center and is the hottest part of the Earth. It is basically like the engine of Earth.

(B) What is a rock?

Ans-

A rock refers to any natural mass of mineral matter that makes up the Earth's crust. Rocks can be of different types having different sizes, shapes and colours.

(C) Name three types of rocks.

Ans-

Igneous, sedimentary and metamorphic rocks are the three types of rocks.

(i) Igneous Rocks: These rocks are formed when magma (molten rock deep within the earth) cools and hardens.

(ii) Sedimentary Rocks: These rocks are formed from particles of sand, shells, pebbles, and other fragments of material.

(F) What are the uses of rocks?

Ans-

Some of the uses of rocks are as follows:

(i) To build houses and buildings

(ii) Precious rocks, called gemstones, are often used to make jewellery

(iii) To make tools for cutting and drilling purposes

(iv) The fossilized remains of plants and animals present in rocks help

in scientific research.

(v) The different minerals that make up different rocks are extracted and can be used as fuels, medicines, fertilizers, and industries.

(G) What are metamorphic rocks?

Ans-

Metamorphic rocks are the rocks that are formed from igneous rocks and sedimentary rocks, under great heat and pressure. For example, under extreme heat and pressure clay transforms to slate and limestone gets transformed to marble.

2.

(A) Tick the correct Answer.

The rock which is made up of molten magma is

(a) Igneous

(b) Sedimentary

(c) Metamorphic

Ans-

Igneous rocks are formed by solidification of volcanic magma.

(B) Tick the correct Answer.

The innermost layer of the earth is

(a) Crust

(b) Core

(c) Mantle

Ans-

Mantle is the middle layer and crust is the outermost layer of the earth.

(C) Tick the correct Answer.

Gold, petroleum and coal are examples of

(a) Rocks

(b) Minerals

(c) Fossils

Ans-

Rocks contain minerals. Fossils are the substances that are formed by dead remains of organic or inorganic matter.

(D) Tick the correct Answer.

Rocks which contain fossils are

(a) Sedimentary rocks

(b) Metamorphic rocks

(c) Igneous rocks

Ans-

These rocks are formed by the deposition of sediments that trap fossils in them.

(E) Tick the correct Answer.

The thinnest layer of the earth is

(a) Crust

(b) Mantle

(c) Core

Ans-

Mantle and core are the inner layers of the earth that are thicker than the crust.

3. Match the following:

(i) Core	(a) Earth's surface
(ii) Minerals	(b) Used for roads and buildings
(iii) Rocks	(c) Made of silicon and alumina
(iv) Clay	(d) Has definite chemical composition
(v) Sial	(e) Innermost layer

	(f) Changes into slate
	(g) Process of transformation of the rock

Ans-

(i) Core (e) Innermost layer

Core is the innermost layer of the earth.

(ii) Minerals (d) Has definite chemical composition Minerals are naturally occurring substances which have certain physical properties and definite chemical composition.

(iii) Rocks (b) Used for roads and buildings

Ans-

Marble is a metamorphic rock that is formed from limestone, which is a sedimentary rock. Under extreme heat and pressure limestone gets converted into marble.

5.

(A) For fun.

What are the minerals most commonly used in the following

objects?	Minerals most commonly used in them
Karhai	Iron,copper
Ornaments	Gold,silver
Lamp	Silver,gold
Hammer	Iron,lead
Bell	Silver,gold
Pan/tava	Iron,aliminium

(B) For fun.

Identify some more objects made up of different minerals.

Ans-

Some more objects that are made of different minerals are utensils decorative items and jewellery. Answers may vary.
