Class 10 SST - Chapter 11: Manufacturing Industries

🌟 Introduction to the Chapter

Production of goods in large quantities after processing from raw materials to more valuable products is called manufacturing. The economic strength of a country is measured by the development of manufacturing industries.

📌 Importance of Manufacturing

Manufacturing sector is considered the backbone of development in general and economic development in particular mainly because:

- **Modernizing Agriculture:** Manufacturing industries help in modernizing agriculture, which forms the backbone of our economy.
- **Employment Generation:** They reduce the heavy dependence of people on agricultural income by providing them jobs in secondary and tertiary sectors.
- **Eradication of Poverty:** Industrial development is a precondition for the eradication of unemployment and poverty from our country.
- **Foreign Exchange:** Export of manufactured goods expands trade and commerce and brings in much-needed foreign exchange.

Industrial Location

Industrial locations are complex in nature. They are influenced by the availability of:

1. Raw material
2. Labor

3. Capital
4. Power
5. Market

⚡ Classification of Industries

Industries can be classified on several bases:

1. **On the basis of source of raw materials:**
    - *Agro-based:* Cotton, woollen, jute, silk textile, rubber and sugar, tea, coffee, edible oil.
    - *Mineral-based:* Iron and steel, cement, aluminum, machine tools, petrochemicals.
2. **According to their main role:**
    - *Basic or key industries:* Supply their products or raw materials to manufacture other goods (e.g., iron and steel).
    - *Consumer industries:* Produce goods for direct use by consumers (e.g., sugar, toothpaste).
3. **On the basis of capital investment:**
    - *Small scale industry:* Maximum investment allowed is up to rupees one crore.
    - *Large scale industry:* Investment is more than one crore.

❌ Common Mistakes to Avoid

> [!WARNING]
>
> 1. **Agro vs Mineral Based:** Remember that textiles like cotton are agro-based, but synthetic textiles might rely on petrochemicals, making them mineral/chemical-based.

> 2. **Public vs Private Sector:** BHEL and SAIL are Public Sector. TISCO and Bajaj Auto are Private Sector. OIL is Joint Sector.

📝 Quick Revision

Information Technology and Electronics Industry

The electronics industry covers a wide range of products from transistor sets to television, telephones, cellular telecom, pagers, telephone exchange, radars, computers and many other equipments required by the telecommunication industry.

- Bengaluru has emerged as the electronic capital of India.
- The major impact of this industry has been on employment generation, especially for women.

Industrial Pollution and Environmental Degradation

Industries are responsible for four types of pollution:

1. Air
2. Water
3. Land
4. Noise

- *Thermal pollution:* Occurs when hot water from factories and thermal plants is drained into rivers and ponds before cooling.
