
Class 12 Chemistry Notes

Class 12 Chemistry notes Chapter 2 Solutions

Class 12 Chemistry notes Chapter 2 Solutions contains all the topic as per the syllabus of NCERT. Each topic is explained in very easy language with colored diagrams. Students can understand Typical topics easily step by step. **Class 12 chemistry notes** Chapter 2 Solutions state is prepared by our experts as per the latest syllabus and exam pattern Class 12 chemistry. Calculation of problems is given in very simple ways after consulting from various books and expert teachers. Also, you can download Class 12 Notes of other Subjects like Chemistry, Mathematics Formulas sheets, Biology. Along with Notes, we are also providing chapters wise notes of class 12 all other subjects. After reading the Class 12 chemistry Notes of Chapter 2 Solutions definitely you will get good marks in board exam Class 12 Chemistry Notes . Each concept is explained in a detailed way Solutions notes make according to the Class 12th NCERT Chemistry book. Students can download pdf file and do study offline so that preparation of exam will be done in better in the bottom section pdf button given so that you have to click on it and can download coloured notes of class chemistry. Notes made according to NCERT Syllabus so that any student who studying in class 12 can read no matter which state you belong to even this notes can help to prepare for completive exam also.

Class 12 Chemistry Notes Chapter - 2 Solution

Solution :- Homogeneous mixture of two or more components is called solution.

For example – mixture of salt and sugar, mixture of oxygen and nitrogen, mixture of sugar in water, etc.

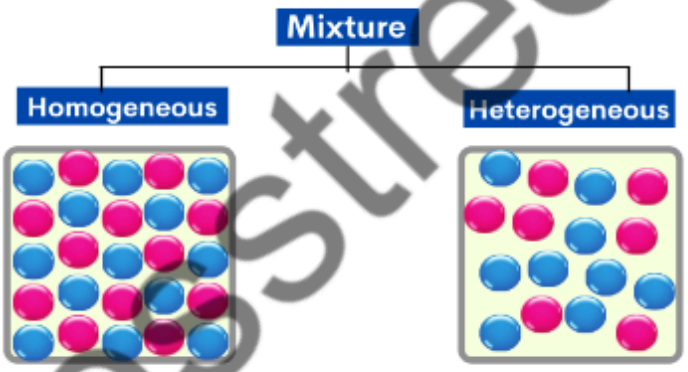
Mixture can be broadly categorized into two types:

Homogeneous mixture :- A mixture of two or more components with uniform composition and properties throughout the solution are known as homogenous mixture. Homogeneous mixture is generally referred as solution.

For example – solution of salt or sugar in water, cough syrup, cup of coffee, Air, Mouthwash, perfume etc...

Heterogeneous mixture :- A mixture of two or more components with non-uniform composition and properties throughout the solution are known as heterogeneous mixture.

For example – solution of water and sand, solution of oil and water, water and chalk powder, mixture of mustard oil and water, etc.



Solute and Solvent :-

Solvent :- Substance which is present in largest quantity in a solution; is generally referred as solvent. For example – In the solution of salt in water, since water is present in larger quantity, thus, water is called solvent.

Solute:- Substance which is present in lesser quantity in a solution, is generally called solute. For example – in the solution of salt in water, since Salt is present in less quantity, thus, Salt is called solvent.
