Class 7 Science NCERT Solutions in English Chapter – 1 Nutrition in Plants

- Post category:Class 7 Science NCERT Solution In English

Here we are providing **Class 7 Science NCERT Solutions in English** Chapter – 1 Nutrition in Plants include all questions presented in the NCERT Science Class 7 books. Candidates can enlist the help of the NCERT Science Class 7 solutions in English on the next page and gain a deeper understanding of the concepts. NCERT Class 7 Science NCERT Solutions in English Chapter – 1 Nutrition in Plants Class 7 Science NCERT Solutions in English Chapter – 1 Nutrition in Plants is designed by our team of subject matter experts to help students prepare for exams. English students can view the PDF of the NCERT Class 7 Science Solutions on the page below. From the NCERT Science Book English Questions and Answers on this page, students will learn how to correctly solve NCERT problems.

Remember that the NCERT Class 7 Science Book Solution is the best resource for a good study of the 18 chapters. Use the NCERT Class 7 Science Book Solution as a reference and keep practicing with the answers to questions and exercises until you improve your answers to all chapters of your Class 7 Science Program. Class 7 Science NCERT Solutions in English Chapter – 1 Nutrition in Plants will help you solve all NCERT Class 7 Science questions chapter 1 smoothly. if you want more notes for various subject then **click here**

Class 7 Science NCERT Solutions in English Chapter – 1 Nutrition in Plants

---

Q 1 :-

Why do organisms need to take food?

Ans 1 :- All organisms need to take food to get energy for the growth, development and

maintenance of their bodies.

Q 2 :-

Distinguish between a parasite and a saprotroph.

Ans 2 :-

Difference between a parasite and a saprotroph :

S. No.	Parasite	Saprotroph
1.	Organisms derive nutrition from the body of other living organisms (host) are parasites.	Plants which derive nutrition from dead and decaying organisms are called saprotrophs.
2.	Example: Cuscata (Amar bel)	Example: Mushrooms.
3.		

Q 3 :-

How would you test the presence of starch in leaves?

Ans 3 :-

- Take a potted plant with variegated leaves – for example, money plant or crotons.
- Keep the plant in a dark room for three days so that all the starch gets used up.
- Now select a leaf cover its portion with a black strip paper and keep the plant in sunlight for about six hours.
- Pluck the leaf from the plant. Mark the uncovered area in it and trace them on a sheet of paper.
- Dip the leaf in boiling water for a few minutes.
- After this, immerse it in a beaker containing alcohol.
- Carefully place the above beaker in a water-bath and heat till the alcohol begins boil.
- Now dip the leaf in a dilute solution of iodine for a few minutes.
- Take out the leaf and rinse off the iodine solution.
- You observe that the presence of starch in various areas of the leaf which was uncovered.

Q 4 :-

Give a brief description of the process of synthesis of food in green plants.

Ans 4 :-

Leaves are the food factories of plants. The synthesis of food in plants occurs in leaves. There fore, all the raw materials (Water, Carbon dioxide and sunlight) must reach there. Water and minerals are transported to the leaves by the vessels which run like pipes throughout the root, the stem, the branches and the leaves. The leaves have a green pigment called chlorophyll which helps leaves to capture the energy of the sunlight. This energy is used to synthesise (prepare) food from carbon dioxide and water.

Q 5:

Show with the help of a sketch that the plants are the ultimate source of food. 1

Ans 5:

All the living being depends on plants whether directly or indirectly. For example, the plant cater animals depends directly on plants but carnivore depends indirectly on plants. The following sketch shows some examples of plant dependency.

Q 6 :-

Fill in the blanks:

(a) Green plants are called …… since they synthesise their own food.

(b) The food synthesised by the plants is stored as ……

(c) In photosynthesis solar energy is captured by the pigment called ……

(d) During photosynthesis plants take in …… and release ……

Ans 6:

(a) Green plants are called **autotrophs** since they synthesise their own food.

(b) The food synthesised by the plants is stored as **starch.**

(c) In photosynthesis solar energy is captured by the pigment called **Chlorophyll**.

(d) During photosynthesis plants take in **carbon dioxide** and release **oxygen**.

Q 7:

Name the following:

(i) A parasitic plant with yellow, slender and tubular stem.

(ii) A plant that has both autotrophic and heterotrophic mode of nutrition.

(iii) The pores through which leaves exchange gases.

Ans 7:

(i) A parasitic plant with yellow, slender and tubular stem – **Cuscuta**

(ii) A plant that has both autotrophic and heterotrophic mode of nutrition – **Pitcher plant,**

Venus flytrap.

(iii) The pores through which leaves exchange gases – **Stomata**

Q 8:

Tick the correct Ans :

(a) Amarbel is an example of:

(i) autotroph (if) parasite (iiii) saprotroph (iv) host

(b) The plant which traps and feeds on insects is:

(i) Cuscuta (ii) china rose (iv) pitcher plant (iv) rose

Ans 8:

(a) Amarbel is an example of (ii) parasite.

(b) The plant which traps and feeds on insects is (iv) pitcher plant.

Q 9:

Match the items given in Column I with those in Column I:

Column A	**Column B**
Chlorophyll	Bacteria
Nitrogen	Heterotrophs
Amarbel	Pitcher plant
Animals	Leaf
Insects	Parasite

Ans 9:

Column A	**Column B**
Chlorophyll	Leaf
Nitrogen	Bacteria
Amarbel	Parasite
Animals	Heterotrophs
Insects	Pitcher plant

Q 10 :-

Mark ‘T if the statement is true and ‘F’ if it is false: 1

(i) Carbon dioxide is released during photosynthesis. (T/F)

(i) Plants which synthesise their food themselves are called saprotrophs. (T/F)

(iii) The product of photosynthesis is not a protein. (T/F)

(iv) Solar energy is converted into chemical energy during photosynthesis. (T/F)

Ans 10:

(i) Carbon dioxide is released during photosynthesis. (False)

(i) Plants which synthesise their food themselves are called saprotrophs. (False)

(iii) The product of photosynthesis is not a protein. (True)

(iv) Solar energy is converted into chemical energy during photosynthesis. (True)

Q 11:

Choose the correct option from the following:

Which part of the plant takes in carbon dioxide from the air for photosynthesis?

(i) Root hair

(i) Stomata

(iii) Leaf veins

(iv) Sepals

Ans 11

(ii) Stomata

Q 12:

Choose the correct option from the following:

Plants take carbon dioxide from the atmosphere mainly through their:

(i) roots

(ii) stem

(iii)) lowers

(iv) leaves

Ans 12 :- (iv) leaves

If you want chapter wise NCERT Solutions for class 7 Science in English then Link given below.

CHAPTER NO.	CHAPTER NAME
1	Nutrition in Plants
2	Nutrition in Animal
3	fiber to Fabric
4	Heat
5	Acids, bases and Salts
6	physical and Chemical changes
7	Weather, Climate and Adaptations of Animals to Climate
8	Winds, Storms and Cyclones
9	Soil
10	Respiration in Organisms

11	Transportation in Animals and Plants
12	Reproduction in Plants
13	Motion and Time
14	Electric Current and its Effects
15	Light
16	Water: A Precious Resource
17	Forests : Our Lifeline
18	Waste water Story
