Class 7 Science NCERT Solutions in English Chapter – 16 Water A Precious Resource

- Post category:Class 7 Science NCERT Solution In English

Here we are providing **Class 7 Science NCERT Solutions in English** Chapter – 16 Water: A Precious Resource include all questions presented in the NCERT Science Class 7 books. Candidates can enlist the help of the NCERT Science Class 7 solutions in English on the next page and gain a deeper understanding of the concepts. NCERT Class 7 Science NCERT Solutions in English Chapter – 16 Water: A Precious Resource Class 7 Science NCERT Solutions in English Chapter – 16 Water: A Precious Resource is designed by our team of subject matter experts to help students prepare for exams. English students can view the PDF of the NCERT Class 7 Science Solutions on the page below. From the NCERT Science Book English Questions and Answers on this page, students will learn how to correctly solve NCERT problems.

Remember that the NCERT Class 7 Science Book Solution is the best resource for a good study of the 18 chapters. Use the NCERT Class 7 Science Book Solution as a reference and keep practicing with the answers to questions and exercises until you improve your answers to all chapters of your Class 7 Science Program. Class 7 Science NCERT Solutions in English Chapter – 16 Water: A Precious Resource will help you solve all NCERT Class 7 Science questions chapter 16 smoothly. if you want more notes for various subject then **click here**

Class 7 Science NCERT Solutions in English Chapter – 16 Water: A Precious Resource

---

Q 1:

Mark ‘T’ if the statement is true and ‘F’ if it is false:

(a) The freshwater stored in the ground is much more than that present in the rivers and lakes of the world. **(T/F)**

(b) Water shortage is a problem faced only by people living in rural areas**. (T/F)**

(c) Water from rivers is the only source for irrigation in the fields. **(T/F)**

(d) Rain is the ultimate source of water. **(T/F)**

Ans 1:

(a) The freshwater stored in the ground is much more than that present in the rivers and lakes of the world. (T)

(b) Water shortage is a problem faced only by people living in rural areas. (F)

(c) Water from rivers is the only source for irrigation in the fields. (F)

(d) Rain is the ultimate source of water. (T)

Q 2:

Explain how groundwater is recharged?

Ans 2:

The rainwater and water from other sources such as rivers and ponds seeps through the soil and fills the empty spaces and cracks deep below the ground. The process of seeping of water into the ground is called infiltration. By the process of infiltration, groundwater gets recharged.

Q 3:

There are ten tube wells in a lane of fifty houses. What could be the long term impact on the water table?

Ans 3:

Ten tube-wells are too much for a lane of fifty houses, this can lead people to mindlessly exploit the groundwater. This can lead to depletion of the water table in the long run.

Q 4:

You have been asked to maintain a garden. How will you mini mise the use of water?

Ans 4:

Drip irrigation and sprinklers system can be used in the garden to minimize the use of water. Watering to plants should be done to mini mise loss of water by evaporation.

Q 5:

Explain the factors responsible for the depletion of water table.

Ans 5:

Following factors are responsible for depletion of water table:

- There is more demand of water due to increasing population. Which lead to increasing demand of water for various human activities.
- Deforestation has removed a large portion of forest cover. This has disturbed the natural process of recharging the groundwater.
- Demand for water has increased and the recharging of the ground water has reduced. The mismatch between demand and supply is mainly responsible for depletion of water table.

Q 6:

Fill in the blanks with the appropriate Anss:

(a) People obtain groundwater through_____ and _____.

(b) Three forms of water are _____, _____ and _____.

(c) The water bearing layer of the earth is _____.

(d) The process of water seepage into the ground is called _____.

Ans 6:

(a) People obtain groundwater through wells and tube wells.

(b) Three forms of water are solid, liquid and gas.

(c) The water bearing layer of the earth is water table.

(d) The process of water seepage into the ground is called infiltration.

Q 7:

Which one of the following is not responsible for water shortage?

(i) Rapid growth of industries

(ii) Increasing population

(iii) Heavy rainfall

(iv) Mismanagement of water resources

Ans 7:

(iii) Heavy rainfall

Q 8:

Choose the correct option. The total water

(i) in the lakes and rivers of the world remains constant.

(ii) under the ground remains constant.

(iii) in the seas and oceans of the world remains constant.

(iv) of the world remains constant.

Ans 8:

(iv) of the world remains constant.

Q 9:

Make a sketch showing groundwater and water table. Label it.

Ans 9:
